Research Summary

As an undergraduate, I have done research in theoretical and experimental particle physics and optical physics, pure mathematics, and machine learning at South Dakota Mines, SLAC National Accelerator Laboratory, and Fermi National Accelerator Laboratory. I have been fortunate to work with truly amazing people and either directly or indirectly with experiments such as ANNIE, LUX-ZEPLIN, nEXO, SciBooNE, and SuperCDMS.

Education

2020–2024 South Dakota Mines (South Dakota School of Mines and Technology)
B.S. Physics and Mathematics
Minors: Computer Science and Computational Statistics
GPA: 3.93/4.00

Research Appointments

(Additional information on individual projects can be found in the Research Projects Section and is hyperlinked by each project)

Aug 2023–Present Undergraduate Research Assistant, South Dakota Mines
PI: Dr. Randy Hoover, Electrical Engineering and Computer Science Department
Contributions:
- Investigating the use of convolutional deep learning methods for temporal graph forecasting (additional information)

Jun 2023–Aug 2023 DOE SULI Intern, Fermi National Accelerator Laboratory
PI: Dr. Patrick Fox, Theory Department
Contributions:
- Investigated the feasibility of using SciBooNE to search for dark photons through visible decay channels (additional information)
- Attended the International Symposium on Lattice Field Theory (Lattice 2023) and the 14^{th} International Neutrino Summer School 2023

Aug 2022–Present Undergraduate Research Assistant, South Dakota Mines
PI: Dr. Patrick Fleming, Mathematics Department
Contributions:

- Found isomorphisms that map between the extended $\mathbb{R}^2$ plane, (hemi)sphere, and $\mathbb{R}^3$ vector space constructions of the real projective plane (additional information)
- Presented findings at Mathematical Association of America (MAA) Rocky Mountain Section 2023 meeting and a math department colloquium

Jun 2022–Aug 2022 DOE SULI Intern, SLAC National Accelerator Laboratory
PI: Dr. Brian Mong, Fundamental Physics Directorate
Contributions:

- Created a Monte Carlo simulation of electrostatic chamber radon assay systems
- Developed an analysis method to determine the initial populations of long-lived radioactive isotopes in assayed materials with complete decay history fitting (additional information)
- Helped assemble a new electrostatic chamber radon assay system
- Presented results at the Stanford Physics, Identity, and Equity Workshop (SPIEW) and the American Physical Society (APS) Prairie Section 2022 meeting

Dec 2021–Present Undergraduate Research Assistant, South Dakota Mines
PI: Dr. Jingbo Wang, Physics Department
Contributions:

- Developing a new likelihood-based reconstruction method for ANNIE (additional information)
- Conducting a simulation-based feasibility study for a neutrino-argon measurement in ANNIE (additional information)
- Restored ANNIE's simulation softwares including GENIE, WCSim (GEANT4-based detector simulation), and ANNIEDirt (GEANT4-based fast particle propagator) after their ∼5 year hiatus
- Miscellaneous work on ANNIE software including creating Docker images, bash scripts, documentation, and maintaining and contributing to ANNIE's simulation and analysis softwares
- Presented results at the 2023 APS April meeting and multiple student research symposia and ANNIE collaboration meetings

Jan 2021–Dec 2021 Undergraduate Research Assistant, South Dakota Mines
PI: Dr. Richard Schnee, Physics Department
Contributions:

- Developed an environmental monitoring system for the ultra-low radon cleanroom at South Dakota Mines (additional information)
- Assisted with material assays for SuperCDMS and LUX-ZEPLIN
- Assisted in assembling the cleanroom tent for a new cold emanation system and started the commissioning of the system

Honors and Awards

Oct 2023	National Science Foundation Graduate Research Fellowship Program *Applicant, Not Yet Awarded:* Proposed using ANNIE to study neutrino-argon interactions, specifically neutron multiplicity.
Aug 2023	Member of the ANNIE Collaboration *Context:* First and only undergraduate collaboration member
Apr 2023	APS Division of Particles and Fields Travel Grant for April Meeting *Context:* Gave a talk in the Neutrinos IV (non-undergraduate) session
Mar 2023	Outstanding Physics Junior, South Dakota Mines *Context:* Awarded to 1-2 physics juniors chosen by the physics department faculty each year
Mar 2023	Leadership Award for The Society of Physics Students (SPS), South Dakota Board of Regents
Nov 2022	Private Dinner with Dr. Nigel Lockyer and Gov. Mike Rounds *Context:* I was 1 of 2 students (and the only undergraduate) that attended a private dinner with Dr. Nigel Lockyer (former director of Fermilab and TRIUMF), Gov. Mike Rounds (former Governor and current Senator of South Dakota), and other prominent community members. Students were invited by the physics associate department head.
Apr 2022	Sigma Pi Sigma Honor Society
2020–2023	Dean's List (all semesters)

Scientific Collaborations

Nov 2023–Present	Accelerator Neutrino Neutron Interaction Experiment (ANNIE) *Member:* ANNIE is a 26-ton gadolinium-doped water Cherenkov detector on the Booster Neutrino Beam (BNB) at Fermilab. The primary physics goal of ANNIE is to make precision measurements of the number of final state neutrons from neutrino interactions in water to improve the systematic uncertainties of next-generation long-baseline neutrino experiments. In addition, ANNIE is also doing detector R&D on new Large Area Picosecond PhotoDetectors (LAPPDs) and Water-based Liquid Scintillator (WbLS) detector medium. The ANNIE collaboration consists of more than 40 collaborators from 19 institutions and 2 national labs in 5 countries.

Professional Service and Leadership

May 2023–Present	Physics Departmental Action Team *Member:* Implement change to support department improvement. This consists of diversity, equity, and inclusion efforts, implementation of active learning, and other departmental issues. I am 1 of 3 undergraduate members selected by the physics department to be on the team.
Oct 2023–Present	APS Inclusion, Diversity, and Equity Alliance (APS-IDEA) *Member:* The APS Inclusion, Diversity, and Equity Alliance (APS-IDEA) is an APS Innovation Fund initiative with a mission of empowering the physics community to enact strategies for improving equity, diversity, and inclusion.

Apr 2023–Present — Society of Physics Students (SPS) and Sigma Pi Sigma (National Council)

Associate Zone Councilor (AZC): I am AZC for Zone 11 (which spans MN, SD, ND, NE, and IA). I was elected to this position as a result of a Zone wide election. I manage correspondence between the SPS national branch and chapters in Zone 11, along with events and outreach activities across Zone 11.

Co-Chair of the Burnout Committee: The burnout committee is tasked with discussing and implementing aid at the national level for students experiencing burnout which, according to a 2022 poll, was one of the most important issues facing physics students.

Apr 2022–Aug 2023 — South Dakota Mines' Society of Physics Students (SPS) Chapter

Vice President: Generally support the chapter by finding outreach events, club activities, assist in management, and lead meetings.

Feb 2022–Present — Health and Fitness Club

Founder, President (Feb 2022–Apr 2023), and Vice President (Apr 2023–Present): The Health and Fitness Club is a student community focused on promoting physical and mental well-being through activities, advice, and support in various areas of health and fitness. To this end, I founded and was the club president until April 2023 when I stepped down as president to support the next generation of leadership.

Apr 2022–Present — Peer Mentor

Physics and Mathematics Peer Mentor: I serve as a peer mentor in the First Year Peer Mentoring Program at South Dakota Mines, guiding first-year students in acclimating to campus life, offering academic support, and fostering a sense of community through workshops and events.

Research Projects

(This section contains information about each of my research projects as opposed to research appointments as in the Research Appointments Section. Additional information about each project can be found at Noah-Everett.github.io/Research.)

Aug 2023–Present

Using Convolutional Deep Learning Methods for Temporal Graph Forecasting

Advisor: Randy Hoover, South Dakota Mines, Electrical Engineering and Computer Science Department

Contributions:

- Implementing the proposed model with PyTorch Geometric
- Evaluating the model's performance with multiple temporal graph datasets

Jun 2023–Present

Feasibility Study for Using Direction Sensitive Photosenors for Detailed Track Reconstruction in Unsegmented Scintillation Detectors No Electric Drift Field

Advisor: None (Independent Project)

Contributions:

- Created a fully configurable detector simulation using Geant4 and NEST to predict detector performance
- Created an analytical ray tracer for geometric lenses to design a preliminary lens system for the detector's direction sensitive photosensors
- Developed analysis methods to determine optimal detector configuration and sensitivity

Jun 2023–Aug 2023

Search for Dark Photon Decay Via $A' \to \ell^+\ell^-$ in SciBooNE and ANNIE

Advisor: Patrick Fox, Fermilab, Theory Department

Contributions:

- Used Neutrino Simulations of the Booster Neutrino Beam to find the expected number of A' decays in SciBooNE's SciBar and ANNIE's water tank as a function of the kinetic mixing strength and mass
- Proposed reconstruction methods to tag dark photon decays in SciBooNE and ANNIE

May 2023–Aug 2023

Analytical Meridional, Non-Paraxial Ray Tracing

Advisor: None (Independent Project)

Contributions:

- Presented a method for meridional (2-dimensional), non-paraxial (non-small angle approximation) ray tracing
- Provided a Python simulation framework for sensitivity analysis of optical systems, reward function for reinforcement-based lens design, and other uses

Aug 2022–Present

Likelihood-based Track Reconstruction for ANNIE

Advisor: Jingbo Wang, South Dakota Mines, Physics Department

Contributions:

- Developed a Geant4 simulation to produce data needed to predict detector response, including photon emission, stopping power (dE/dx), and photon transmission distance
- Developing charged lepton PMT and LAPPD detector response prediction, the first of its kind for LAPPDs

Aug 2022–Present

Isomorphisms for Real Projective Plane Constructions
Advisor: Patrick Fleming, South Dakota Mines, Mathematics Department
Contributions:

- Found isomorphisms that map between the extended $\mathbb{R}^2$ plane, (hemi)sphere, and $\mathbb{R}^3$ vector space projective plane constructions
- Investigated the similarity of projective plane constructions to an idealized type of photosensor

Jun 2022–Aug 2022

Improving Radon Assay Data Analysis With Complete Decay History Fitting
Advisor: Brian Mong, SLAC Fundamental Physics Directorate
Contributions:

- Created a Monte Carlo simulation of electrostatic chamber radon assay systems
- Developed an analysis method to determine the initial populations of long-lived radioactive isotopes in assayed materials
- Helped assemble a new electrostatic chamber radon assay system

Dec 2021–Present

Feasibility Study For Neutrino-Argon Interaction Measurement in ANNIE
Advisor: Jingbo Wang, South Dakota Mines, Physics Department
Contributions:

- Restored ANNIE's simulation softwares including GENIE, WCSim (GEANT4-based detector simulation), and ANNIEDirt (GEANT4-based fast particle propagator) after their ∼5 year hiatus
- ANNIE software work including creating Docker images, bash scripts, documentation, and maintaining and contributing to ANNIE's simulation and analysis softwares
- Modified ANNIE's simulation softwares to accurately simulate proposed detector modifications
- Produced the entirety of the simulation results used for the study

Jan 2021–Dec 2021

Environmental Monitoring System for Cleanrooms
Advisor: Richard Schnee, South Dakota Mines, Physics Department
Contributions:

- Developed an environmental monitoring system for the ultra-low radon cleanroom at South Dakota Mines (illustration here)
- Assisted with material assays for SuperCDMS and LUX-ZEPLIN
- Assisted in assembling the cleanroom tent for the new cold emanation system and started the commissioning of the system
